

St. Paul Fuel Tanks Aleutian Islands, Alaska

PROJECT DATE
2002

SUBSTRATE
Steel

INTRODUCTION

When Ed Ehler bought his round trip ticket to the Aleutian Islands, planning to return home on a

Tuesday, he was laughed at by the locals. They believed there was no way, considering the weather, that the job of surface prep and application of a 3coat system to their fuel tank could be accomplished by then. The fog was heavy at times and it rained quite a bit, but Ed finished the tanks within 48 hours of his start time and earned himself another job on St. George.

“It was a job that only Wasser could do!” Ed replied beaming, happy that he didn’t have to stay long and even happier that he proved them wrong. He knew that for this job, he had the solution.

OWNER

St. Paul City

PROJECT

Fuel Tank Exteriors
