

# Statoil Co., Well Pad Liner West Virginia

**PROJECT DATE**  
2014

**SUBSTRATE**  
Compacted Earth

**OWNER**

Statoil Co.

**PROJECT**

Well Pad Liner

**CONTRACTOR**

B&E Powder Solutions

**STRUCTURE**

Well Pad

**SUBSTRATE**

Compacted Earth

**APPLICATION METHOD**

Pre-manufactured sheets that were seam sealed on site. Each roll was 15'x87' @ 60 mils of Polyflex 311

**DIMENSIONS**

250' x 200'

## INTRODUCTION

Statoil's shale gas and oil business began in the US through active partnerships in the Marcellus play spanning several states in the eastern US. They are also present in the Eagle Ford play in South Texas, and in North Dakota's Bakken play.

Wasser supplied Polyflex 311 GL (Geomembrane liner) as the system of choice to prevent any well pad run-off or soil contamination during drilling and well completion.

One of the benefits of this system is that the geomembrane can be cleaned, cut into manageable sections and reused on additional well pad sites.
