

# Blubber Bay Ferry Terminal Texada Island, British Columbia

**PROJECT DATE**  
2003

**SUBSTRATE**  
Steel

## INTRODUCTION

Although the terminal at Blubber Bay that services the island of Texada in the northern gulf of British Columbia, Canada is small, it is one of the busiest in the BC Ferries network. The steelwork for the extension was fabricated and painted in the shop of Alberni Engineering in Port Alberni, then assembled on site and touched up. As this terminal is a busy one and somewhat isolated, BC Ferries wanted a coating system that would last and could be easily maintained without any disruptions to the ferry sailings. The Wasser system met all these requirements.

**OWNER**  
BC Ferries

**PROJECT**  
Terminal Extension

**CONTRACTOR**  
West Shore  
Constructors Ltd.

**STRUCTURE**  
Steel

**SYSTEM**  
**Surface preparation**  
SSPC-SP10 Near White  
Blast Cleaning

**Primer**  
MC-Zinc 3-5mils DFT  
**Intermediate**  
MC-Ferrox B 3-5 mils DFT  
**Top-coat**  
MC-Ferrox A 2-4 mils DFT
