

# Lakehaven Water Tanks Federal Way, Washington

**PROJECT DATE**  
2001

**SUBSTRATE**  
Steel

## INTRODUCTION

When Lakehaven Utility District needed to overcoat the exterior of their three potable water tanks, Wasser's moisture cured urethanes were the ideal choice for the job. The 1 million, 2 million and 4 million gallon tanks did not need to be drained before painting, because MCUs can be applied to a wide range of steel surfaces temperatures with no restrictions on dew point. Also, Wasser's surface tolerant MC-Miozinc primer allowed for vacuum shrouded power tool surface prep, avoiding the necessity of sand-blasting and containment.

**OWNER**  
Lakehaven Utility District

**PROJECT**  
Potable Water Tank  
Exterior Overcoat

**CONTRACTOR**  
Root Painting

**SURFACE PREPARATION**  
SSPC-SP3 Power Tool  
Cleaning

**SPOT PRIME**  
MC-Miozinc  
3.0-5.0 mils DFT

**INTERMEDIATE**  
MC-CR  
3.0-4.0 mils DFT

**TOP-COAT**  
MC-Luster  
2.0-4.0 mils DFT
